

Description:

- 1. A game hosts one or more rounds and uses a single configuration to determine play settings such as auto-play mode
- 2. Each round takes place on one game grid, which has a specific number of rows that can be checked if full.
- 3. During a round, many tetris pieces are spawned, each with a random shape and random fall speed.
- 4. A tetris piece is composed of 3 to 5 tetris blocks.
- 5. A tetris piece is either a simple piece type (I,J,L,O,S,T,Z) which support rotation or a madness piece type (Cross, Slash, Plus) which do not support rotation
- 6. Each round records a statistics entry capturing file name and number of each tetris piece spawned every round
